Nipomo Community Services District **Town Division** CONSUMER CONFIDENCE REPORT 2002

DISTRICT ORDINANCE CODE SECTION 3.24 Adopted January 29, 1992

In order to promote conservation of our most precious resource, Nipomo Community Services District has an ordinance prohibiting certain uses of water. The ordinance states that no customer shall waste water. Wasting water is defined as:

- (1) Use of potable water to irrigate grass, lawns, groundcover, shrubbery, crops, vegetation and trees between the hours of nine a.m. and six p.m. (9:00 am - 6:00 pm) or in such a manner as to result in run-off for more than five minutes;
- Use of potable water to wash sidewalks, walkways, driveways, parking lots, open ground or other hard surface areas by direct application;
- (3) Allow potable water to escape from breaks within the customers plumbing system for more than four hours after the customer is notified or discovers the break;
- (4) Use of potable water for sewer system maintenance or fire protection training without prior approval by the District.

If everyone saves a little, together we'll save a lot!

Check your water system for leaks.

There are three stages of water conservation:

Stage 1: Voluntary Conservation * Customers are requested to voluntarily limit the amount of water used from May 15th to October 15th of each year to that amount absolutely necessary for health and business. A fifteen percent (15%) reduction in water use is requested.

This brochure is a snapshot of the quality of

the water that we provided last year. Included are

details about where your water comes from, what

it contains, and how it compares to State

standards. We are committed to providing you with

this information to keep you informed about your

water supply. For more information about your

water, you may call (805) 929-1133 and ask for

Doug Jones. Public meetings are held the first and

third Wednesday of each month at 9:00 a.m. at

148 South Wilson Street in Nipomo, California.

Este informe contiene información muy

ó hable con alguien que lo entienda bien.

importante sobre su agua beber. Tradúzcalo

Stage 2: Mandatory Conservation

Limited water use: Outdoor irrigation limited to 6 p.m.-9 a.m. Residential car washing is prohibited.

Stage 3: Mandatory Conservation More limited water use: Quantity of water used shall not exceed 75 gallons per day per person.

*Nipomo Community Services District is presently in Stage 1 - Voluntary Conservation

WATER CONSERVATION TIPS

	Normal Use	Conservation Use		
Shower	Conventional	Water-saving		
(5 mins)	showerhead	showerhead		
	25-35 gallons	10 gallons		
Brushing	Tap running	Wet brush, rinse briefly		
Teeth	5 gallons	1/4 gal or less		
Tub Bath	Full	Minimal water level		
, ,	36 gallons	10-12 gallons		
Toilet	Conventional	Using an ultra-low-		
Flushing	toilet	flow toilet		
_	5-7 gal/flush	1-6 gallons/flush		
Dishwashing	Tap running	Wash & rinse in		
	25 gallons	dishpans or sink		
		5 gallons		
Automatic	Full cycle	Short cycle		
Dishwasher	9-12 gallons	7 gallons		
Shaving	Tap running	Full basin		
-	20 gallons	1 gallon		
Washing	Tap running	Full basin		
Hands	2 gallons	1 gallon		
Outdoor	Average hose	Water deeply,		
Watering	or sprinkler	infrequently and only		
	system	when plants need it		
	10 gal/min.

Nipomo Community Services District **Town Division**

CONSUMER CONFIDENCE REPORT

2002

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, spring, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- > Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.
- >Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.
- > Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- > Radioactive contaminants, which can be naturally occurring or the result of oil production and mining activities.
- > Organic chemical contaminants, including synthetic and volatile organic chemicals, which are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.

In order to ensure that tap water is safe to drink, USEPA and the California Department of Services (Department) prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. Department regulations also establish limits for contaminants in bottled water that m provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline 1 (800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy. persons who have undergone organ transplants people with HIV/AIDS or other immune syste disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care provider. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline 1 (800-426-4791).

Your water comes from 7 sources:

- 3. Eureka Well
- 4. Olympic Well
- 5. Omiya Well
- 6. Sundale Well
- 7. Via Concha Well

An assessment of the drinking water sources was completed in May and June of 2002. These sources are considered most vulnerable to the following activities associated with contaminates detected in the water supply: Historic Gas Stations, Septic Systems-Low and high Density, Sewer Collection Systems-Low and High Density, Sewer Collection Systems and Wastewater Treatment Plants. A copy of the complete assessment may be viewed at the District office.

Nipomo Community Services District - Town Division CONSULIER CONFIDENCE REPORT - _ 002 WATER QUALITY DATA

The table below lists all the drinking water contaminants that we detected during the 2002 calendar year. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. Unless otherwise noted, the data presented in this table is from testing done January 1 - December 31, 2002. The State requires us to monitor for certain contaminants less than once per year because the concentrations of those contaminants are not expected to vary significantly from year to year. Some of the data, though representative of the water quality, is more than one year old.

Terms & abbreviations used below:

- Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California **Environmental Protection Agency**
- Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health, MCLGs are set by the U.S. Environmental Protection Agency.
- Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water, Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.
- Maximum Residual Disinfectant Level (MRDL): The level of a disinfectant added for water treatment that may not be exceeded at the consumer's tap,
- Maximum Residual Disinfectant Level Goal (MRDLG): The level of a disinfectant added for water treatment below which there is no known or expected risk to health. MRDLs are set the U.S. Environmental Protection Agency.
- Regulatory Action Level (AL): The concentration of a contaminant, which, if exceeded, triggers treatment or other requirements that a water system must follow.
- Primary Drinking Water Standards (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water
- Secondary Drinking Water Standards (SDWS): MCLs for contaminants that affect taste, order, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.
- n/a: not applicable ND: not detectable at testing limit NS: no standard or not regulated MFL: million fibers per liter
- NTU: Nephelometric Turbidity Units pCi/l: picocuries per liter (a measure of radiation) ppb: parts per billion or micrograms per liter (µg/L) ppm: parts per million or milligrams per liter (mg/L) ppq: parts per quadrillion or picograms per liter (pg/L) ppt: parts per trillion or nanograms per liter (ng/L)

Detected Contaminants	Units	MCL	PHG (MCLG)	Results Average Range		Typical Sources of Contaminants
Inorganic Boron	ppm	NS		0.06 9	ND - 0.13 (2002-2002)	Some men who drink water containing boron in excess of action level over many years may experience reproductive effects, based on studies in dogs.
Chromium VI (Hexavalent Chrophium)	ppm	NS		0.69	ND - 2.0 (2002-2002)	N/A
Sodium	ppm	NS		61.1	42 – 95 (2002-2002)	Sodium refers to the salt present in the water and is generally naturally occurring.
Total Hardness (as CaCO3)	ppm	NS		326	134 – 558	Hardness is the sum of polyvalent cations present in the water, generally magnesium and calcium. The cations are usually naturally occurring.
Vanadium	ppm	NS		0.00 56	ND - 0.011 (2002-2002)	The babies of some pregnant women who drink water containing vanadium in excess of action level may have an increased risk of developmental effects, based on studies in laboratory animals.

Item(s) shaded are greater than MCL or AL. Additional information regarding the violation is provided below.

Additional Information and Explanations

About our LangIndx: Corrosivity less than 0 indicates your water may be corrosive to the plumbing and fixtures. The Corrosivity MCL was set to protect you against unpleasant aesthetic affects such as color, taste and odor. Violating this MCL does not pose a risk to public health

ND - 2.7 (2002-2002)

About our TDS: The TDS or Total Dissolved Solids in your water was found at levels that exceed the secondary MCL. The TDS MCL's was set to protect you against unpleasant aesthetic affects such as color, taste or hardness. Violating this MCL does not pose a risk to public health.

Compliance with Other Regulations

The State requires us to test our water on a regular basis to ensure its safety. In the previous year, we met all sampling, treatment and reporting requirements.
