

 $\epsilon$ itings,

My name is Michael LeBrun. I have been the General Manager of Nipomo Community Services District since September, 2004. I have lived on the Nipomo Mesa since 1994 and I am happy to have the opportunity to work in my community.

The data included in this mailer is forwarded to all customers annually to give assurance your water supply is safe. This report contains plenty of tables and information. The upshot is - the District continues to supply sefo, high-quality drinking water.

As the General Manager, I direct all aspects of your service district's day to day operation, providing clean, safe water, efficient wastewater collection, and solid waste services. I am given policy direction by the District's Board of Directors - a five-member board that is elected by you, the residents of this District.

**Nipomo Community Services District Town Division** CONSUMER CONFIDENCE REPORT

NCSD Board of Directors:

Larry Vierheilig ..... President Ed Eby ...... Vice President Mike Winn ...... Director Judith Wirsing ...... Director Cliff Trotter ...... Director

The Board and I invite you to become informed and involved with the numerous issues facing the District. Regular Board meetings are held the 2<sup>nd</sup> and 4<sup>th</sup> Wednesday of each month. Agendas and minutes are posted on our website ("Nipomocsd.com"). Additionally, a complete audio recording of meetings is available upon request.

At our website you can sign up to receive email notification of various District actions (posting of agendas and minutes, new reports and studies, etc.) - see "Sign Up For Notification."

# **CONSERVATION REMINDERS**

Finally, a reminder about water use and some facts and figures:

Summer is around the corner and our average customer sees a 100% increase in water use during the summer. This leads to some large water bills and puts serious demand on our water system.

Do what you can to conserve water and save yourself some money:

- Check your irrigation system for leaks and proper operation prior to returning it to summer service mode.
- Use a broom in place of a hose to clean surfaces.
- Using water-saving appliances washing machines, dishwashers, toilets, and fixtures in your home can reduce your use and bill by approximately 30%. When electric costs are considered, energy/water-efficient appliances save even more.

Enjoy your summer and this beautiful place we are so fortunate to call home.

Yours in service,

# Nipomo Community Services District - Town Division CONSUMER CONFIDENCE REPORT - 2004 WATER QUALITY DATA

The table below lists all the drinking water contaminants that we detected during the 2004 calendar year. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. Unless otherwise noted, the data presented in this table is from testing done January 1 - December 31, 2004. The State requires us to monitor for certain contaminants less than once per year because the concentrations of those contaminants are not expected to vary significantly from year to year. Some of the data, though representative of the water quality, is more than one year old.

## Terms & abbreviations used below:

- Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health, PHGs are set by the California Environmental Protection Agency.
- Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health.
   MCLGs are set by the U.S. Environmental Protection Agency.
- Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs
  (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.
- Maximum Residual Disinfectant Level (MRDL): The level of a disinfectant added for water treatment that may not be exceeded at the consumer's tap.
- Maximum Residual Disinfectant Level Goal (MRDLG): The level of a disinfectant added for water treatment below which there is no known or expected risk to health. MRDLs are set the U.S. Environmental Protection Agency.
- Regulatory Action Level (AL): The concentration of a contaminant, which, if exceeded, triggers treatment or other requirements that a water system must follow.
- Primary Drinking Water Standards (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.
- Secondary Drinking Water Standards (SDWS): MCLs for contaminants that affect taste, order, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.
- n/a: not applicable
   ND: not detectable at testing limit
   NS: no standard or not regulated
   MFL: million fibers per liter
- NTU: Nephelometric Turbidity Units pCi/l: picocuries per liter (a measure of radiation) ppb: parts per billion or micrograms per liter (ug/L) ppm: parts per million or milligrams per liter (mg/L) ppq: parts per quadrillion or picograms per liter (pg/L) ppt: parts per trillion or nanograms per liter (ng/L)

Lead and Copper R	ule						
Detected Contaminants	Units	No. of Samples Collected	No. Sites Exceeding AL	90 <sup>th</sup> Percentile Level	AL.	PHG	Typical Sources of Contaminants
Lead (Pb)	ppb	19 (2003)	0	2.50	15	2	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers, erosion of natural deposits
Copper	ppm	19 (2003)	0	0.522	1	0.17	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
Primary Drinking Wa	ater Stand	ards (PDWS	5)				
Detected Contaminants	Units	MCL	PHG (MCLG)	R Average	esults Range		Typical Sources of Contaminants
Arsenic (As)	ppb	50	n/a	2.2	ND - 8.0 (2002-2004)		ion of natural deposits; runoff from orchards, glass and tronics production wastes
Barium (Ba)	ppm	1	2	0.0315	0.0161 - 0.0453 (2002-2004)		harge from oil drilling wastes and from metal refineries; ion of natural deposits
Cadmium (Cd)	ppb	5.0	0.07	0.30	ND - 0.9 (2002-2004)	depo	nal corrosion of galvanized pipes; erosion of natural osits; discharge from electroplating and industrial chemical ories, and from metal refineries; runoff from waste batteries paints
Chromium (Total Cr)	ppb	50.0		ND	ND - 2 (2002-2004)		harge from steel and pulp mills and chrome plating; erosion atural deposits
Fluoride (F)	ppm	2	1	0.10	ND - 0.2 (2002-2004)		ion of natural deposits; water additive that promotes strong a; discharge from fertilizer and aluminum factories.
Mercury	ppb	2	1.2	ND	ND - 0.04 (2002-2004)		harge from steel and pulp mills and chrome plating; erosion atural deposits
Nickel	ppb	100	12	ND	ND - 1 (2002-2004)	Eros	ion of natural deposits; discharge from metal factories
Nitrate (NO3)	ppm	45	45	4.74	ND - 14.5 (2002-2004)		off and leaching from fertilizer use; leaching from septic s and sewage; erosion of natural deposits
Selenium (Se)	ppb	50		ND	ND - 3 (2002-2004)		harge from petroleum, glass, and metal refineries; erosion atural deposits; discharge from mines and chemical

manufacturers; runoff from livestock lots (feed additive)

## **CONSUMER CONFIDENCE REPORT - 2004**

Detected Contaminants	Units	MCL	PHG (MCLG)			Typical Sources of Contaminants	
Radioactivity Gross Alpha	pCi/L	15		3.28	ND - 9.27 (2000-2004)	Erosion of natural deposits	
Gross Beta	·pCi/L	50		0.394	(2004-2004)	Decay of natural and man-made deposits	
Uranium	pCi/L	20	0.5	3.75	0.11 - 5.37 (2004-2004)	Erosion of natural deposits	
Organic Total Trihalomethanes (TTHMs)	ppb	80		0.97	ND - 4.9 (2002-2004)	By-product of drinking water chlorination	
Secondary Drinking Water S	Standards	(SDWS	ì				
Detected Contaminants	Units	MCL	PHG (MCLG)	Average	Results Range	Typical Sources of Contaminants	
Inorganic Chloride	ppm	500		77.3	<b>42-143</b> (2000-2004)	Runoff/leaching from natural deposits; seawater influence	
Color (Unfiltered)	Units	15		ND	ND - 7 (2002-2004)	Naturally-occurring organic materials	
Corrosivity (Langlier Index)		> 0		-0.6	-2 - 0.1 (2002-2004)	Natural or industrial-influenced balance of hydrogen, carbon an oxygen in the water; affected by temperature and other factors	
Iron (Fe)	ppb	300		51	ND - 170 (2002-2004)	Leaching from natural deposits; Industrial wastes	
Manganese (Mn)	ppb	50		ND	ND - 20 (2002-2004)	Leaching from natural deposits	
Specific Conductance	umhos /cm	1600		851	342-1440 (2002-2004)	Substances that form ions when in water; seawater influence	
Sulfate (SO4)	ppm	500		182	6 - 310 (2000-2004)	Runoff/leaching from natural deposits; industrial wastes	
TDS	ppm	1000		583	210 - 910 (2002-2004)	Runoff/leaching from natural deposits	
Turbidity	NTU	5		ND	ND - 0.5 (2002-2004)	Soil runoff	
Unregulated Contaminants							
Detected Contaminants	Units	MCL	PHG (MCLG)	Results Average Range		Typical Sources of Contaminants	
Inorganic Boron	ppm	NS		0.060	ND - 0.13 (2000-2004)	Some men who drink water containing boron in excess action level over many years may experience reproductive effects, based on studies in dogs.	
Chromium VI (Hexavalent Chromium)	ppb	NS		0.74	ND - 2.2 (2003-2003)	N/A	
Sodium	ppm	NS		68.3	36 - 112 (2000-2004)	Sodium refers to the salt present in the water and is generally naturally occurring.	
Total Hardness (as CaCO3)	ppm	NS		298	70 - 553 (2002-2004)	Hardness is the sum of polyvalent cations present in the water generally magnesium and calcium. The cations are usually naturally occurring.	
Vanadium	ppm	NS		0.0057	ND - 0.012 (2003-2004)	The babies of some pregnant women who drink water containing vanadium in excess of action-level may have an increased risk of developmental effects, based on studies in laboratory animals.	
Organic Bromoform	ppb	NS		0.83	ND - 3.7 (2002-2004)	N/A	
Dibromochloromethane	ppb	NS		ND	ND - 1.2 (2002-2004)	N/A	

Item(s) shaded are greater than MCL or AL. Additional information regarding the violation is provided below.

#### **Additional Information and Explanations**

About our Langlier Index: Corrosivity less than 0 indicates your water may be corrosive to the plumbing and fixtures. The Corrosivity MCL was set to protect you against unpleasant aesthetic affects such as color, taste and odor. Violating this MCL does not pose a risk to public health.

#### Compliance with Other Regulations

The State requires us to test our water on a regular basis to ensure its safety. In the previous year, we met all sampling, treatment and reporting requirements.
