OCTOBER 25, 2012

REVIEW WATER CONSERVATION PROGRAM 2012 ACTIVITY AND DISCUSS PROGRAM DIRECTION IN 2013

ITEM

Review District Water Conservation Program and discuss Program Direction [RECOMMEND RECEIVE REPORT AND DIRECT STAFF]

BACKGROUND

The District adopted its Water Conservation Program in February 2008 with the primary goal of reducing water use by 15% utilizing a number of 'core' and 'non-core' conservation measures.

The core program measures include:

- Public outreach and education
- Advertising
- Workshops
- Technical assistance (leak detection and water audits)
- Conservation-based, multi-tiered water rate structure

The non-core measures are rebates for plumbing retrofits, high efficiency clothes washers, lawn or 'turf' removal, and 'smart' irrigation controller installations.

Of the core measures, all with the exception of 'workshops' were implemented in 2012. Additionally, the non-core measure of clothes washer rebates continue to be offered in 2012.

In 2004, water use per person per day within the District peaked at 257 gallon. In 2007, the year prior to a formal Conservation Program adoption, per capita use stood at 226 gallons per day. By 2010, per capita use dropped to 174 gallons per day or a 23% decrease in per capita use (2007-2010). In 2011, District per capita use is up slightly from 2010 at 182 gallons per day – still a near 20% decrease since 2007 and a near 30% decrease from the 2004 use rate.

A memorandum summarizing District per capita usage rates and District compliance with California Urban Water Conservation Council (CUWCC) Best Management Practices (BMP) for water conservation is provided – see Attachment A.

In 2006, the District established a full-time Water Conservation and Public Outreach position. The position was vacant most of 2011. The District utilized a combination of reassignment of duties and consulting services to continue program implementation and maintain compliance with State recommended Best Management Practices throughout 2011 and 2012. With the adoption of the District's 2012-2013 fiscal year budget, the full-time Water Conservation and Public Outreach position was eliminated and Water Conservation Program duties were formally transferred as follows (See 2012-2013 District Organizational Chart – Attachment B):

- Conservation Program Administration – Assistant Engineer, with consulting services as needed.

- Customer Service and Education – Office staff and operations Customer Service worker.
- Outreach – Public Information Assistant
- Classroom Education (grades K-6) – by contract

2012 Summary of accomplishments:

- Implemented a 4-tier water conservation rate structure that is compliance with California Urban Water Conservation Council guidelines and best management practices. In the structure, 4th tier water rates apply at 100 units of water use and above (average District customer uses ~40 units per two-month billing period). Fourth tier water cost 300% of what first tier water cost providing a strong monetary signal to reduce water use. The full impact of this change will take a number of years to be felt as customers adjust their water use patterns over time.
- Answered approximately 1,300 calls from customers with questions about saving water/money. Each call is handled by a staff person who is informed on leak detection and basic water conservation and irrigation measures. Questions are answered and callers are directed to the District web resources and/or offered a 'service' visit by District Customer Service staff.
- Each month, staff reviews water meter read data and contacts property owners by 'door hanger' if usage is abnormally high. The District made approximately 270 such proactive notifications to customers this year.
- As of October 16, 2012, staff made 103 service calls to investigate leak reports/high water use. These service calls provide face-to-face, hands on, counseling/education on water conservation, irrigation practices, and leak detection.
- Distributed 'Water Ways – The Story of Your Water' newsletter to all 3-6 grade teachers in Nipomo-area public schools (Dana, Nipomo, and Dorothea Lange schools) to promote a District-subsidized 'free' conservation presentation.
- Presented 'The Story of Your Water' training to twelve classes, approximately 340 students grades 3-6.
- Maintained and promoted the District's existing high efficiency clothes washer rebate program with 22 rebates issued through September of this year, 209 rebates issued over life of program (over 200 rebates totaling over \$15,000 over life of program).
- Maintained compliance with State requirements for water conservation Best Management Practices (BMP).
- Continued active water conservation reminders in billing, lobby area, and Adobe Press. Attached are most recent examples of Adobe Press advertisements showing the different message delivered according to the season (Attachment C). The Adobe Press is broadly distributed across the southern Nipomo Mesa every Friday. Conservation reminder 'bill-inserts' were also provided to customers in two of the six water bills in 2012.

- Participated with County-wide *Partners for Water Conservation* to implement a County specific website to aid home owners in plant selection and water conservation practices (see: www.slowaterwiselandscaping.com).
- Maintain and disseminate information regarding local water conservation oriented service providers upon request.

2013 Program Direction

In 2013, a five-year review of the Water Conservation Program will be undertaken. The District will provide a formal review of BMP compliance to the CUWCC, as required, by April 2013 and use this review as a launch for comprehensive program review.

With formalized staff assignment of the various Water Conservation Program elements and increased staffing (Assistant Engineer and Public Information Assistant vacancies are approved to be filled in early 2013), staff expects the District Water Conservation Program to continually improve and produce greater results.

Staff is developing a tracking system to more accurately capture customer-staff interactions related to water conservation. The new tracking system will be in place by January 1, 2013. Ongoing leak detection efforts will be improved as necessary and be more formally tracked and reported as well.

In 2013, the District will review, improve, and more aggressively promote its water audit (exterior and interior) program.

FISCAL IMPACT

District water conservation efforts are included in the 2012-2013 fiscal budget.

RECOMMENDATION

Staff recommends that your Committee receive the presentation, ask questions, and direct staff.

SUBJECT: 2011 PER CAPITA WATER USE UPDATE AND BEST MANAGEMENT PRACTICES IMPLEMENTATION STATUS SUMMARY

This memorandum presents an update of the Nipomo Community Services District's (District) 2011 per capita water use and a summary of the District's California Urban Water Conservation Council (CUWCC) Best Management Practices (BMP) implementation status.

2011 Per Capita Water Use Update

A complete description of the per capita water use analysis is available in the District's 2010 Urban Water Management Plan (UWMP). Table 1, Table 2, and Figure 1 show the District's 2011 per capita water use in comparison with historical and benchmark per capita water uses described and defined in the 2010 UWMP.

Table 1. Per Capita Water Use Estimates

| Year | Gross Water Use, acre-ft/year | Population Served | Per Capita Water Use, gal/capita/day |
|------|-------------------------------|---------------------|--------------------------------------|
| 1994 | 1,718.00 | 6,521 | 235.2 |
| 1995 | 1,805.00 | 6,885 | 234.0 |
| 1996 | 1,934.70 | 7,249 | 238.3 |
| 1997 | 2,036.86 | 7,613 | 238.8 |
| 1998 | 1,909.74 | 7,978 | 213.7 |
| 1999 | 2,271.20 | 8,342 | 243.1 |
| 2000 | 2,396.94 | 8,706 | 245.8 |
| 2001 | 2,285.04 | 9,050 | 225.4 |
| 2002 | 2,709.32 | 9,394 | 257.5 |
| 2003 | 2,633.33 | 9,739 | 241.4 |
| 2004 | 2,907.58 | 10,083 | 257.4 |
| 2005 | 2,787.29 | 10,427 | 238.6 |
| 2006 | 2,666.34 | 10,771 | 221.0 |
| 2007 | 2,818.36 | 11,116 | 226.4 |
| 2008 | 2,752.90 | 11,460 | 214.5 |
| 2009 | 2,698.18 | 11,804 | 204.1 |
| 2010 | 2,366.54 | 12,148 | 173.9 |
| 2011 | 2,487.70 | 12,204 ¹ | 182.0 |

¹ Calculated using a factor of 2.92 persons per connection established in 2010 applied to the number of connections in 2011.

Table 2. Baseline, Compliance, Interim Target, and Target Water Use

| Parameter | Water Use (gpcd) |
|-------------------------------------|------------------|
| Baseline Daily Per Capita Water Use | 240.0 |
| 2010 Daily Per Capita Water Use | 173.9 |
| 2011 Daily Per Capita Water Use | 182.0 |
| 2015 Interim Urban Water Use Target | 222.0 |
| 2020 Urban Water Use Target | 204.0 |

Figure 1. Historical, Baseline, Interim Target, Target, and Compliance Per Capita Water Use

Figure 2 shows monthly per capita water use in 2010, 2011, and 2012-to-date. Per capita water usage peaks in the summer months, which reflects a typical demand pattern.

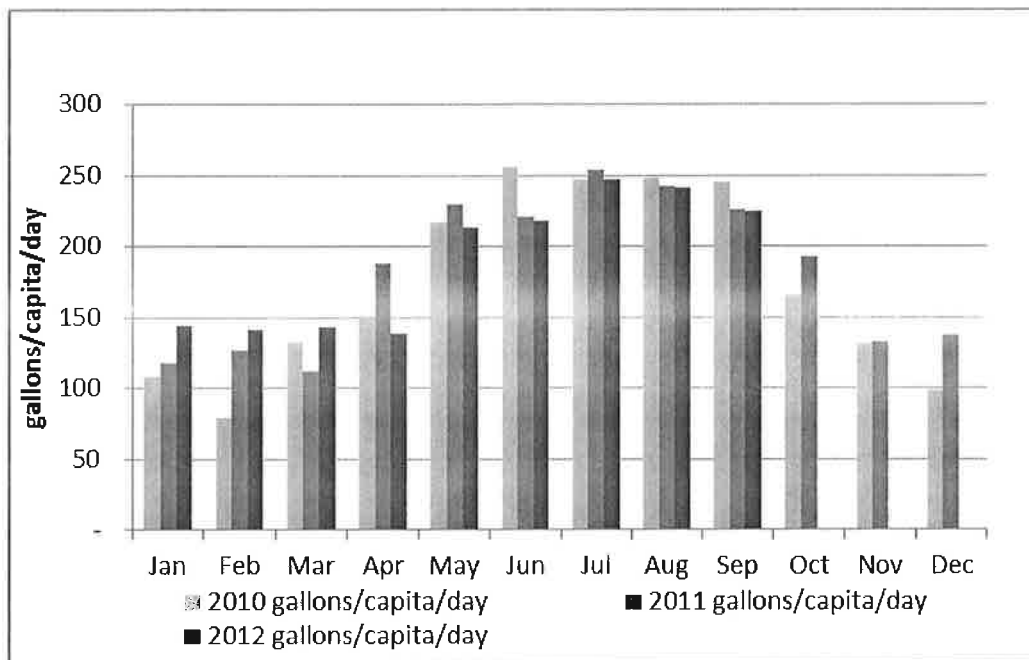

Figure 2. Monthly Per Capita Water Use

BMP Implementation Status

Water suppliers must have a complete UWMP to be eligible for State funding. State funding has been conditionally awarded to the District through the Proposition 84 Integrated Regional Water Management Round 1 Implementation Grant applied for by the County of San Luis Obispo. The conditions to receive the grant funding require the following from the District:

- An UWMP that is deemed complete by DWR
- Implementation or a schedule and budget for implementation of BMPs

The District has completed its 2010 UWMP and it was deemed complete by California Department of Water Resources (DWR) on November 10, 2011. Additionally, on March 29, 2011, DWR confirmed its review of the District's AB1420 Self-Certification Statement –Tables 1 and 2 (AB1420 Tables) regarding implementation of the BMPs and determined that the District is eligible for State funding.

The AB 1420 Tables presented BMP compliance through the BMP Checklist compliance option. In addition to the BMP Checklist option, there are two alternative conservation approaches for BMP compliance –the Flex Track approach and the Gallons per Capita per Day (GPCD) approach. At the time that the AB1420 Tables were submitted, the District needed to show compliance by using the BMP Checklist option because a number of the BMPs were not fully implemented. Additionally, compliance through the GPCD alternative conservation approach was not verified at the time because it was dependent on DWR's ongoing review and approval of the District's UWMP and Senate Bill x 7-7 (SB7) GPCD compliance analysis. Now that the District has an approved UWMP and SB7 GPCD compliance analysis, the District should update its AB1420 Tables using the GPCD approach to remain eligible for State funding.

The specific requirements, definitions, and approaches for BMP implementation compliance, which are summarized and reported in the AB1420 Tables, are defined in California Urban Water Conservation Council's (CUWCC) Memorandum of Understanding (MOU). The MOU separates BMPs into Foundational BMPs and Programmatic BMPs. Water suppliers can evaluate their compliance with the MOU by using the full BMP list, the Flex Track Menu,

or the GPCD approach. The District should evaluate its MOU compliance using the GPCD approach for the following reasons:

1. The GPCD approach is closely aligned with the methodology for measuring GCPD compliance with SB7.
2. The GPCD approach is closely aligned with State legislative funding eligibility requirements, which require compliance with SB7, rather than AB1420, for years after 2014.
3. The District will spend less time, effort, and funding on implementing Programmatic BMPs, provided it meets its GPCD requirements, which it currently does.

The GPCD approach allows the District to comply with the MOU by implementing the Foundational BMPs and utilizing the GPCD approach in lieu of implementing the Programmatic BMPs provided the District’s GPCD approach results in equal or greater water savings when compared with the BMP list approach. To show that the District’s GPCD approach achieves greater water savings than the BMP list approach, an evaluation of Programmatic BMP compliance and Foundational BMP compliance is described in the following to sections.

Programmatic BMP Compliance

The GPCD approach for Programmatic BMP compliance includes the following sections as required by CUWCC.

For retail water agencies choosing the GPCD Option for compliance with the Programmatic BMPs, the retail water agency shall submit the following calculations along with supporting data as part of their first normal biennial report for that period:

- (1) Potable Water GPCD for each year in the baseline period;
- (2) 2018 GPCD Target and five Biennial GPCD Targets; and

- (1) The District’s potable water GPCD for each year in the baseline period and the baseline GPCD of 238.3 is shown in Table 3.

Table 3. Baseline GPCD

| Calendar Year | Distribution System Population | Daily System Gross Water Use (mgd) | Annual Daily Per Capita Water Use (gpcd) | 10 year running average |
|---------------|--------------------------------|------------------------------------|--|-------------------------|
| 1997 | 7,613 | 2 | 239.0 | |
| 1998 | 7,978 | 2 | 213.7 | |
| 1999 | 8,342 | 2 | 243.1 | |
| 2000 | 8,706 | 2 | 245.8 | |
| 2001 | 9,050 | 2 | 225.4 | |
| 2002 | 9,394 | 2 | 257.5 | |
| 2003 | 9,739 | 2 | 241.4 | |
| 2004 | 10,083 | 3 | 257.4 | |
| 2005 | 10,427 | 2 | 238.6 | |
| 2006 | 10,771 | 2 | 221.0 | 238.3 |

(2) The District's Target and Biennial GPCD Targets are shown in Table 4. The District's 2018 GPCD Target is 195.4 GPCD as shown in the equation below.

$$2018 \text{ GPCD Target} = 238 \text{ GPCD} * 0.82 = \mathbf{195.4 \text{ GPCD}}$$

Table 4. Biennial GPCD Targets

| Year | Compliance Report | Target | Highest Acceptable Bound |
|------|-------------------|--------|--------------------------|
| 2010 | 1 | 229.7 | 238.3 |
| 2012 | 2 | 221.1 | 229.7 |
| 2014 | 3 | 212.5 | 221.1 |
| 2016 | 4 | 204.0 | 212.5 |
| 2018 | 5 | 195.4 | 195.4 |

The District's usage in 2011 was 182 GPCD as shown in the equation below:

$$\text{District Potable Water GPCD} = (2487.7 \text{ AFY}-0 \text{ AFY})/12,204 \text{ people}/365 \text{ days} = \mathbf{182 \text{ GPCD}}$$

The District's per capita water usage is currently below its 2018 GPCD Target of 195.4 and is therefore in compliance with the MOU for the GPCD approach for Programmatic BMP compliance. To support and document the District's GPCD compliance, the following materials will be submitted as required by the CUWCC MOU:

A retail water agency shall be considered to be in compliance with the BMPs in any reporting period when it submits the following:

- (1) Complete "Water Supply & Reuse" and "Accounts & Water Use" standard reports;*
- (2) Supporting data necessary to calculate that reporting period's Potable Water GPCD; and*
- (3) Calculations showing the reporting period's Potable Water GPCD is less than or equal to that period's Biennial GPCD Target, or Highest Acceptable Bound when the period's Potable Water GPCD has been weather-adjusted*

Foundational BMP Compliance

The District currently implements all of the Foundational BMPs to some extent, but will need to implement some additional items to be in compliance with the MOU. The following sections describe the Foundational BMP activities completed-to-date and future BMP activities necessary to remain in compliance with CUWCC MOU.

BMP 1.1.1 Conservation Coordinator

The District currently complies with this BMP by contracting with a consultant (Water Systems Consulting, Inc.) with an AWWA Water Use Efficiency Practitioner Grade 1 certification. The consultant is responsible for acting as a representative for the District for the CUWCC, researching and summarizing water use efficiency programs as requested by District staff, tracking, updating, and reporting BMP compliance, and ensuring that the District is up-to-date with water use efficiency trends. Additionally, District Staff field questions and requests from customers and provide information, incentives, and materials to customers to encourage water conservation and water use efficiency. District Staff and its consultant coordinate and manage the water conservation program by tracking, planning, and reporting on BMP implementation.

BMP 1.1.2 Water Waste Prevention

The District is in compliance with and implements this BMP as described in the 2010 UWMP.

BMP 1.1.3 Wholesale Agency Assistance Programs

This BMP is not implemented or scheduled for implementation because it is not applicable to the District as a retail agency. In the future the District will be selling water to Golden State Water Company and Rural Water Company. It is anticipated that when this happens, the District will develop a plan to implement this BMP.

BMP 1.2 Water Loss Control

The District completed the AWWA Free Water Audit Software standard water audit and water balance analysis in November 2011 to determine the current volume of apparent and real water loss and the cost impact of these losses on operations. The District's water audit validity score calculated by the AWWA Software is 84 out of 100, which surpasses the CUWCC BMP requirement of achieving a score of 66 or higher. The results of the standard water audit and water balance are shown in Appendix A. The standard water audit and water balance is required to be completed at no less than annual intervals and submitted in the CUWCC BMP 1.2 report form every reporting period. The District will complete the next standard water audit and water balance by December 2012 and the next 2011-2012 CUWCC BMP report will be completed and submitted by April 2013.

The District is required to seek training in the AWWA water audit method and component analysis process during the first four years of BMP implementation. The District's consultant will attend an AWWA Water audit method training webinar on November 29, 2012 on behalf of the District to meet the requirements of this BMP. Upon completion of training, the consultant will prepare a required component analysis to be completed and submitted by April 2013. This component analysis will need to be updated every four years after this initial analysis.

Furthermore, the District is required to keep records of intervention(s) performed, including standardized reports on leak repairs, the economic value assigned to apparent losses and to real losses, miles of system surveyed for leaks, pressure reduction undertaken for loss reduction, infrastructure rehabilitation and renewal, volumes of water saved, and costs of intervention(s). Examples of these types of reporting forms are provided in Appendix B. The District does not currently have a formal leak repair database to track the required information and should implement one immediately for the purposes of establishing a water audit and water balance benchmark for comparison in future years.

BMP 1.3 Metering with Commodity Rates for All New Connections and Retrofit of Existing Connections

The District is 100% metered and bills on a bi-monthly using a four-tier rate structure, effective as of November 1, 2011. The District meets the coverage requirements of this BMP.

BMP 1.4 Retail Conservation Pricing

The District currently implements a rate structure that is compliant with the requirements of this BMP. An updated analysis will be completed by April 2013 to determine the status of compliance with the required minimum percentage of water sales revenue from volumetric rates.

BMP 2.1 Public Information Programs

The District currently implements this BMP as described in the 2010 UWMP. An updated description of the District's public information program will be provided in the annual report submitted to CUWCC in April 2013.

BMP 2.2 School Education Programs

The District currently complies with this BMP by contracting with Science Discovery to provide the following water use efficiency conservation education and materials:

- 1) Curriculum materials developed and/or provided by agency (including confirmation that materials meet state education framework requirements and are grade-level appropriate).*
- 2) Materials distributed to K-6 students. When possible, school education programs will reach grades 7-12 as well.*
- 3) Description of materials used to meet minimum requirement.*
- 4) Annual budget for school education program.*
- 5) Description of all other water supplier education programs (Lists follow in Section D).*

An updated description of the school education program and materials will be provided in the annual report submitted to CUWCC in April 2013.

Appendix B. Example Leak Repair Report Forms

| LEAKAGE MANAGEMENT PLAN TO CONTROL REAL LOSSES | |
|---|-------------|
| Name of Water Utility: _____ | Date: _____ |
| I. Describe the Leakage Management Approach | |
| A-1. Describe the general approach to be employed to create or refine the leakage management strategy for the water distribution system: _____ _____ | |
| II. Leak Survey and Repair Plan | |
| A. Leak Survey Area and Frequency | |
| A-1. Based on records of previous leaks, type and age of piping, soil conditions, high pressure, and faulty installation practices, list the portion of the distribution system to be surveyed. List the survey frequency. List percent of system to be surveyed _____ List frequency of surveys _____ Describe each area to be surveyed under item B-2 of this plan. | |
| A-2. Total miles of main to be surveyed: _____ When calculating pipeline length, include the total length of pipe and exclude customer service connection piping. If only a portion of the system is surveyed, calculate the benefit-to-cost ratio for only the portion surveyed. | |
| A-3. Average length of pipeline surveyed per day: _____ The average survey crew can survey about two miles of main per day. Factors include distances between services, traffic and safety conditions, and number of listening contact points. Explain if more than three miles per day are surveyed: _____ | |
| A-4. Number of working days needed to complete survey (divide line 2 by line 3): _____ | |
| A-5. Describe personnel deployment: _____ _____ | |
| B. Procedures and Equipment | |
| B-1. Describe the procedures and equipment for detecting leaks. The best results are obtained by listening for leaks at all system contact points (such as water meters, valves, hydrants, and blow-offs). _____ _____ | |
| B-2. Describe why the areas noted on the map in step A-1 have the greatest recoverable leakage potential. _____ _____ | |
| B-3. If listening for leaks will not include all contact points, describe the plan for detecting leaks. _____ | |
| B-4. Describe the procedures and equipment you will use to pinpoint the exact location of detected leaks. _____ _____ | |
| B-5. Describe how the leak detection team and the repair crew will work together. How will they resolve the problem of dry holes? _____ _____ | |

| LEAKAGE MANAGEMENT PLAN TO CONTROL REAL LOSSES (continued) | | | |
|--|---|-----------|----------|
| B-6. Describe the methods you will use to determine the flow rates for excavated leaks of various sizes. <hr style="border: 0; border-top: 1px solid black; margin: 5px 0;"/> <hr style="border: 0; border-top: 1px solid black; margin: 5px 0;"/> | | | |
| C. Staffing | | | |
| C-1. How many utility staff will be used? _____ Staffing costs including wages and benefits: Person 1 \$/hr _____ \$/day _____ Person 2 \$/hr _____ \$/day _____ TOTAL \$/hr _____ \$/day _____ | | | |
| C-2. How many consultant staff will be used? _____ Cost of consultant staff: Person 1 \$/hr _____ \$/day _____ Person 2 \$/hr _____ \$/day _____ TOTAL \$/hr _____ \$/day _____ | | | |
| D. Leak Detection Survey Costs | | | |
| Leak detection surveys | \$/day | # of days | Cost, \$ |
| D-1. Utility crew costs | _____ | _____ | _____ |
| D-2. Consultant crew costs | _____ | _____ | _____ |
| D-3. Vehicle costs | _____ | _____ | _____ |
| D-4. Other | _____ | _____ | _____ |
| D-5. Total survey costs | _____ | _____ | _____ |
| E. Leak Detection Budget | | | |
| E-1. Cost of leak detection equipment | \$ | _____ | |
| E-2. Leak detection team training | \$ | _____ | |
| E-3. Leak detection survey costs | \$ | _____ | |
| E-4. Total leak detection costs | \$ | _____ | |
| F. Leak Survey and Repair Schedule | | | |
| Indicate realistic, practical dates: | | | |
| F-1. | When will the leak survey begin? | _____ | |
| F-2. | When will the leak survey be completed? | _____ | |
| F-3. | When will leak repairs begin? | _____ | |
| F-4. | When will leak repairs be completed? | _____ | |

LEAKAGE MANAGEMENT PLAN TO CONTROL REAL LOSSES (continued)

III. Pressure Management Plan

Optimizing water pressure by removing excessive pressure levels and pressure surges is an effective strategy to sustain water infrastructure by minimizing background leakage, maintaining low leakage levels, and reducing water main ruptures and resulting damage. The water utility should assess the potential to improve pressure management in the water distribution system as a means of controlling leakage.

A-1. List the average pressure across the water distribution network: _____

A-2. List any discrete areas of the water distribution system (pressure zones, district metered areas) that experience average water pressure over 75 psi and/or exhibit poor infrastructure condition. These areas should be considered for optimized pressure management:

| Zone #1 | | Zone #2 | | Zone #3 | | Zone #4 | |
|---------|----------|---------|----------|---------|----------|---------|----------|
| Name | Pressure | Name | Pressure | Name | Pressure | Name | Pressure |
| _____ | _____ | _____ | _____ | _____ | _____ | _____ | _____ |

A-3. Describe the pressure optimization potential across the distribution system. First, list the pressure reduction potential for each zone (e.g., none, 15 psi reduction, 30 psi reduction, etc.). Next, describe the method to be employed to attain the improved pressure management (e.g., create/reconfigure pressure zone or DMA; install pressure-reducing valves, install variable-frequency drives on pumps, etc.).

| Pressure Reduction | List Pressure Management Method |
|--------------------|---------------------------------|
| Zone #1: _____ | _____ |
| Zone #2: _____ | _____ |
| Zone #3: _____ | _____ |
| Zone #4: _____ | _____ |

A-4. List the Pressure Management Project Costs:

| | Size | Number | Unit Cost | Costs |
|---|-------|--------|-----------|-------|
| Pressure-Reducing Valves: | _____ | _____ | _____ | _____ |
| Variable-Frequency Drives: | _____ | _____ | _____ | _____ |
| Flowmeters: | _____ | _____ | _____ | _____ |
| Electronic Controllers: | _____ | _____ | _____ | _____ |
| Precast Manholes: | _____ | _____ | _____ | _____ |
| Misc. Piping & Hardware: List _____ | | | | _____ |
| Construction: Labor – _____ workers, _____ days _____ × _____ workers × _____ hr/d × _____ days | | | | _____ |
| Equipment, Truck _____ × _____ days | | | | _____ |
| Total Cost: | | | | _____ |

IV. Leakage Management Plan Summary

A-1. List the Leakage Management Plan Cost for the initial year = Leak Detection & Repair Cost + Pressure Management Cost = _____

A-2. List the anticipated reduction in leakage and cost savings: Volume _____ Cost Savings _____

Prepared by: _____ Date: _____

LEAKAGE MANAGEMENT PROGRAM COST-EFFECTIVENESS SUMMARY (continued)

A. Leak Survey and Repair Program

Step 1. Calculate the value of water recovered (Vwr) from all repaired leaks.

$$(Vwr) = (\text{total leakage recovered in gpm})(\text{average leak duration})(\text{water cost, Wc})$$

Leak duration = $\frac{1}{3}$ of leak survey interval, days

(Wc) = Short-term variable cost of water

$$(Vwr) = \text{___ gpm} \times 1440 \text{ min/d} \times \text{___ days} \times \text{___ /mil gal} \times 1 \text{ mil gal/1,000,000} = \$ \text{___}$$

Step 2. Assemble Leak Survey Program Costs: \$ _____

Step 3. Divide Vwr (from step 1) by the total costs (calculated in step 2).

$$\text{Benefit/Cost Ratio (B:C)} = \frac{\text{value of water recovered}}{\text{total cost of leak detection survey}} = \text{___}$$

For planning continuing leak detection efforts, you can calculate average survey costs per mile.

Step 4. Determine average survey costs per mile of main surveyed (C/mi).

$$C/mi = \frac{\text{total cost of leak detection survey}}{\text{total number of miles surveyed}} = \$ \text{___, mile}$$

B. Pressure Management Program

Step 1. Calculate the value of background leakage recovered (Vbr) from optimized pressures.

$$(Vbr) = (\text{total leakage recovered in gpm})(\text{average leak duration})(\text{water cost, Wc})$$

Vbr – Obtain a measured value of background leakage recovered from DMA metering, or by estimation.

Average leak duration: because the background leakage reduction occurs all year, the average background leak duration is 365 days.

$$(Vbr) = \text{___ gpm} \times 1440 \text{ min/d} \times \text{___ days} \times \text{___ /mil gal} \times 1 \text{ mil gal/1,000,000} = \$ \text{___}$$

Step 2. List Pressure Management Costs from Pressure Management Plan \$ _____

Step 3. Divide Vbr (from step 1) by the total costs (calculated in step 2).

$$\text{Benefit/Cost Ratio (B:C)} = \frac{\text{value of water recovered}}{\text{total cost of pressure management}} = \text{___}$$

Step 4. Payback period for pressure control equipment = $\frac{\text{Program Costs}}{Vbr} = \text{___, yr}$

BOMBS AWAY: Egg-drop competition at Hancock

Elias Brookshire, 14, drops his team's egg off the second floor of a building at Hancock College during an Adventures in Math, Engineering & Computer Science class.

Class all it's 'cracked up' to be

By Anne Star

Young teens tried their hands at engineering last Thursday morning through an egg-drop competition at Hancock College. Twenty-four seventh-, eighth- and ninth-graders — enrolled in a special class in the college's Community Education Program — had a set amount of time to create the best device to protect eggs for a two-story fall from atop Hancock's Science Building.

The class, Adventures in Math, Engineering & Computer Science, was paid for by a federal STEM grant Hancock

received to help get young people interested in pursuing degrees and careers in math and science.

Students worked in groups of four and did two test drops before a third drop was saved.

Materials included cups of marshmallows, Cheezies and popcorn.

Instructors Mary Alice Malouze and Adina Navar led the course, which students are taking without receiving college credit.

The two-week class continued through Thursday, when students were scheduled to try to make a solar-powered vehicle.

Students off to rodeo finals

Jacob Lees of Nipomo qualifies for nationals

By Anne Star

Three local high schoolers in the California High School Rodeo Association District 7 have qualified for the 2012 National High School Finals Rodeo, which will be held July 19 to 22 in Wyoming.

The members placed in the top four of their respective events at the California state finals compete on to help District 7 finish third place in overall points.

NHSFR is the largest rodeo in the world, attracting about 1,500 spectators from across the United States, Canada and Australia.

Athletes compete for national titles, prizes and

thousands of dollars in college scholarships.

District 7 encompasses Santa Luis Obispo, Santa Barbara and Ventura counties.

National qualifiers include Arroyo Grande High student Jacob Lees of Nipomo for barrel riding, Family Partnership Charter School student AJ Hilley of Santa Ynez for pole bending and Santa Ynez Valley High School student Harley Jameson of Los Olivos for cutting.

Hilley's horse, Sonny, was also named California Horse of the Year for the second year in a row by the American Quarter Horse Association.

Eighteen District 7 members, plus fifth through 19th, qualified for the Silver State International Rodeo, which is Monday through July 7 in Winnemucca, Nev.

Those local qualifiers include Hilley in cutting, Nipomo High student Emily Mangione in pole bending,

Great Academy High student Gordon Brangola of Los Alamitos in barrel riding, Rightt High student Calan Clay for barrel riding, and Santa Ynez High student Kaiti Ford in cutting and roping.

Arroyo Grande High student qualifiers include Wyatt Covert in team roping (roper), Kaiti Ford in cutting and barrel riding, Sara Honegger in pole bending and Tristan Rufford in team roping (heeler).

Club restaurants in Paso Robles and Arroyo Grande are helping the District 7 qualifier raise money to fund the national rodeo trip.

Patrons of either restaurant can mention their support of the CHSRA National Rodeo contest from 11 a.m. to 11 p.m. Thursday. The restaurants will donate 15 percent of the bill to District 7.

Did you know

½ of an average customer's annual water use is for landscaped irrigation?

Automated irrigation systems can be great water savers or great water wasters — they must be regularly maintained.

Spending a few hours checking your irrigation system can lead to significant savings on your summer season water bill.

Most sprinkler timer manufacturers offer on-line video tutorials on how to properly set their timer.

The District's website (ncsd.ca.gov) has many helpful tips on how to save water inside and outside the home.

YOUTH BRIEF

State preschool enrollment now open

The California State Preschools operated by the San Luis Obispo County Office of Education are accepting applications for the 2012-13 school year.

The preschools are funded through the state Department of Education, Child Development Division, and are located throughout SLO County.

The programs serve more than 300 children annually by providing a comprehensive preschool and parent educational program.

Full-day programs are available at Grove Beach, San Luis Obispo and Los Osos. The requirements for the extended-day portion are that families must be working a minimum of 30 hours per week or taking a minimum of 12 units of college course work approved vocational training program.

For more information, call 782-7275.

MINOR MADNESS

WORLD'S LARGEST: Tall in the saddle at competition

Arroyo Grande High School student Jacob Lees of Nipomo will compete in bareback riding after placing in the top four of his event at the California state finals competition.

Lees to ride in National High School Finals Rodeo

By Anna Starr
 One Nipomo resident will ride for the Central Coast at the 2012 National High School Finals Rodeo in Wyoming. Arroyo Grande High School student Jacob Lees of Nipomo will compete in bareback riding after placing in the top four of his event at the California state finals competition. The national finals will run from Monday, July 16, through Sunday, July 22. NHSPR is the largest rodeo in the world, attracting almost 1,500 contestants from across the United States, Canada and Australia. Athletes compete for national titles, prizes and thousands of dollars in college scholarships. Area regional qualifiers also include Family Partnership Charter School student Ali Bulkey of Santa Ynez, for pole bending and Santa Ynez Valley High School student Hayley Harner of Los Olivos for cutting. The qualifiers helped District 7 — encompassing San Luis Obispo, Santa Barbara and Ventura counties — to a third-place showing at the California state finals.

Private school enrollment: Gains, losses and status quo

By Gina Permen
 5147 WADSWORTH
 gpermen@theadobe.com

Fewer students are choosing to attend some local private schools, while other schools are expecting a small boost in enrollment or no change. Declining enrollment has become a trend at St. Joseph High School, which has been trying to fill a gap left when its largest-ever senior class of 167 students graduated in 2011. Enrollment in 2010-11 was 55 for grades 9 through 12, compared to 47 in the just-ended school year, said school spokeswoman Nancy Castelan. This fall, the Catholic school is expected to gain between 450 and 500 students, thanks to a boost from a freshman class larger than last year's. A typical total enrollment is 950, Castelan said. "Overall enrollment is declining somewhat," she said, noting large freshman class is needed to stabilize enrollment after staggered senior classes.

St. Joseph's enrollment mirrors the steady decline at Catholic schools regionally. Nearly 29,000 fewer students attended Catholic schools in the 2011-12 school year, down from the 2.7 million who attended them in the 2006-07 school year, according to the National Catholic Educational Association. Enrollment also decreased about 200,000 in the five-year period before that, data show.

Enrollment at other schools, including St. Mary of Assumption School in Santa Maria and Coastal Christian School in Arroyo Grande, has stayed about the same each year. St. Mary will have about 210 students next year, and Coastal Christian will enroll about 185 students. Valley Christian Academy in Santa Maria, on the other hand, is experiencing an increase of about a dozen more students after graduating nine students, one of the school's smallest classes in years.

Principal Chuck Mason said the school is adding another second- and third-grade class this fall, replacing 360 total students instead of last year's 347. "Other classes coming up will be a little bit strange," Mason said, noting that the school has hired two new teachers. "We've been very fortunate. We're really looking forward to a good year."

Orientation required for new Hancock students

- Informational sessions set for Monday, Tuesday at SM campus

By Anna Starr

For the first time this fall, Hancock College student is an requirement to attend an orientation.

Fall 2012 Mega Orientations will be Monday and Tuesday at the Santa Maria campus. Orientation will provide necessary information about college services, including counseling, financial aid, health services, job opportunities and more. Events also provide an opportunity to meet faculty and staff, tour the campus and receive a free academic planner and prizes.

Mega Orientations are from 9 a.m. to noon in the Marian Theatre located inside the Performing Arts Center, building D.

For more information or to register for an orientation, call 922-0900, ext. 3293, or email orientation@hancock.edu.

Did you know
 1/2 of an average customer's annual water use is for landscaped irrigation?

Landscaping with native and drought tolerant plants can save the average water customer *hundreds of dollars* each year.

Nipomo CSD participated with other municipalities throughout the County in developing an interactive website to help property owners understand 'water wise landscaping'.

The website slwaterwiselandscaping.com is specifically tailored to San Luis Obispo County and provides a number of tips and ideas for reducing water use in residential landscapes.

The District's website (ncsd.ca.gov) has many helpful tips on how to save water inside and outside the home and a link to the Water Wise website.

SPEAKING OUT

Letters to the Editor

Maldonado best choice

To the Editor: We are approaching election time, and if you care, it is time to make up your mind who is best to represent the Central Coast. Luis Caprio is a nice lady who votes straight liberal and spends her time explaining to constituents what their benefits are. Abel Maldonado is a local rancher who has been involved in virtually every area of Central Coast politics, and is ideally suited to represent the interest of commerce, as well as the people. The most stinging is concerned with Maldonado's disagreement with the IRS. As a farmer/businessman who was audited five times, let me say reporting income is not always time. It depends on how the government is interpreting the law at the moment. Maldonado is also accused of siding with the liberals in Sacramento. In a state run by Democrats, you all be going along, or government stands still. Those who read this think about whether we need a nice lady or a dedicated rancher/politician representing the Central Coast.

Norman Mehl
Santa Maria

Maldonado's taxing issue

To the Editor: We were disappointed to read Brooks Firestone's attempt to confuse voters about our TV ad, and now we must set the record straight.

Rubes

The facts about Abel Maldonado's long history of neglecting his taxes are crystal clear. Since 1994, federal, state and local tax collectors have resorted to imposing nine separate liens against Mr. Maldonado for failing to pay \$750,840.41 in taxes. In 2009, Mr. Maldonado made a deal with Gov. Arnold Schwarzenegger — in exchange for his seeking vote for the largest tax increase in California history, he would receive a 50 percent reduction in taxes for any property. Shortly thereafter, Schwarzenegger appointed him lieutenant governor. By the time he resigned from California, he was caught in an IRS audit owing \$4.2 million in back taxes. In his 2006-08 tax returns, Mr. Maldonado asked taxpayers to subsidize, through improper deductions, his golf clubs and country club membership, private plane, horse business, the installation, closet remodeling, new outdoor patio and luxury vacation villas in Palm Springs and Shell Beach, among other dubious write-offs. We encourage Mr. Firestone to read the federal tax court documents for himself. The bottom line is Mr. Maldonado embraces a selfish double standard — tax income for everyone else and tax avoidance for himself. If Central Coast voters cannot trust Mr. Maldonado to pay his taxes, how can they trust him in Congress? Mobile Culture Campaign manager Caprio for Congress

Leigh Rubin

Waking up in America

To the Editor: You have a chance to save our country. Do not be led astray by anyone who does not care for anyone, not the rich, middle class or the poor. President Obama has gotten rid of or alienated most of the leaders of countries that were our allies or friends. It appears President Obama wants us to be a Third World country, not a world leader. The American dollar as international currency will be out and the yuan will become the new currency of the world. If the dollar continues to decline, we will not be able to pay our debt to other countries. If we cannot afford to pay our debt, the countries we owe money to will ask for us to have a major company, and our ranking in the world will continue to decline. The president honestly believes we are his sheep, and he is leading us to slaughter. He also thinks we are too dumb to know what is happening. In another four years, we will be down and out trying to get someone to help us out. Our ranking as a world leader will be forever gone. Wake up, America. We fought wars to have freedom. Do not let our constitution when countries have tried and could not do it. Your freedom is being taken away from you right in your face. Don't let this happen. Thanks for listening to a veteran of World War II. John Denning Santa Maria

children in his Kid Zone in the Plaza Square Park. As the festival winds down, he will lead the Kids Parade that ends with the annual Lincoln Penny Toss. Western pioneers, Gay '90s and Victorian costumes are encouraged, and those who aren't dressed appropriately may find themselves thrown into the hogswag —

unless they're wearing an official Harvest Festival button.

Buttons are available for \$1 at stores throughout Arroyo Grande and will be on sale — including an early fall hogswag — at the festival. Buying a numbered button also enters the contest in drawing for a variety of prizes.

Buttons and locations and drawing information are available at www.agwestfest.com/button.htm.

Fall officially begins on September 22 and Nipomo Community Services District offers the following suggestions to help residents lower their water bills:

- Be aware that water needs of plants (including grass) drop dramatically in the fall as the days get shorter. Overwatering in the fall can lead to plant disease.
- Cooler weather and seasonal rains make it possible to significantly reduce and even stop landscape irrigation.
- Lawns need very little irrigation in the winter. At the most apply 1/4 inch of water every three weeks if there is NO rain.
- Now is a good time to make sure your irrigation system is working properly. Adjust your timer/controller back. Replace the backup battery. Fix all leaks.
- Take advantage of cool and wet fall and winter weather to remove water hungry landscapes (lawns) and replace with drought tolerant species — see www.slowaterwiselandscape.com for locally tailored suggestions and information.

Some Indoor Reminders:

- Fix leaks. A faucet that drips can waste up to 3,280 gallons of water per year. A leaky toilet can waste even more water — stop by District office at 148 South Wilson Street for a free toilet leak check kit.
- Check your water meter to track water usage. See District website (ncsd.ca.gov) or call District (929-1133) for help.
- If your shower can fill a one-gallon bucket in less than 20 seconds, replace it with a water efficient showerhead.
- Replace old toilets with more efficient low flow toilets and save as much as five gallons per flush and flush only when-necessary.

Thanks for doing all you can to protect our precious water resource — Nipomo Community Service District

Both kittens, shown pictured above, and cats are available for adoption at Nipomo Dog & Cat Hospital, 525 Sandpiper Drive. On an recent Sunday, four staff members rescued 22 cats in an effort to curb feline overpopulation.

Pet:

Continued from A2
"make cats online!" It was hard not to laugh. Sometimes it is hard not to cry. A couple of weeks ago I called someone who was advertising 32 tens on Craigslist. I told her that I could help her get her cats spayed and neutered. She had a total of 11 kittens, the two mothers and two neutered female cats. I didn't get a call back. If these cats

continued having kittens over the next year, she will have 251 cats! Recently, four of us spent the good part of a Sunday neutering 22 cats. So, it would take 10 days of work to neuter the cats my Craigslist friend might help produce in the next year. Obviously, my chances of causing feline overpopulation are pretty remote. Nevertheless, I'd like to move for the Project Extinction. Let's try to get all dogs and cats in Nipomo spayed and neutered. Let's not count on the factory

breeding of kittens and puppies and dogs instead of shopping. If you would like to help or need help, please contact Animals in Need Fund. By the way, we have kittens and cats for adoption. Veterinarian Robin Shroyer is the co-owner of Nipomo Dog & Cat Hospital, 525 Sandpiper Drive, and founder of Animals in Need, a nonprofit organization for the care of Nipomo business dogs and cats. For more information, contact the hospital at 929-2855 or visit the website at nipomodogandcat.com.

Weitzel:
